

Romeo & Juliet

EMBOSSERS

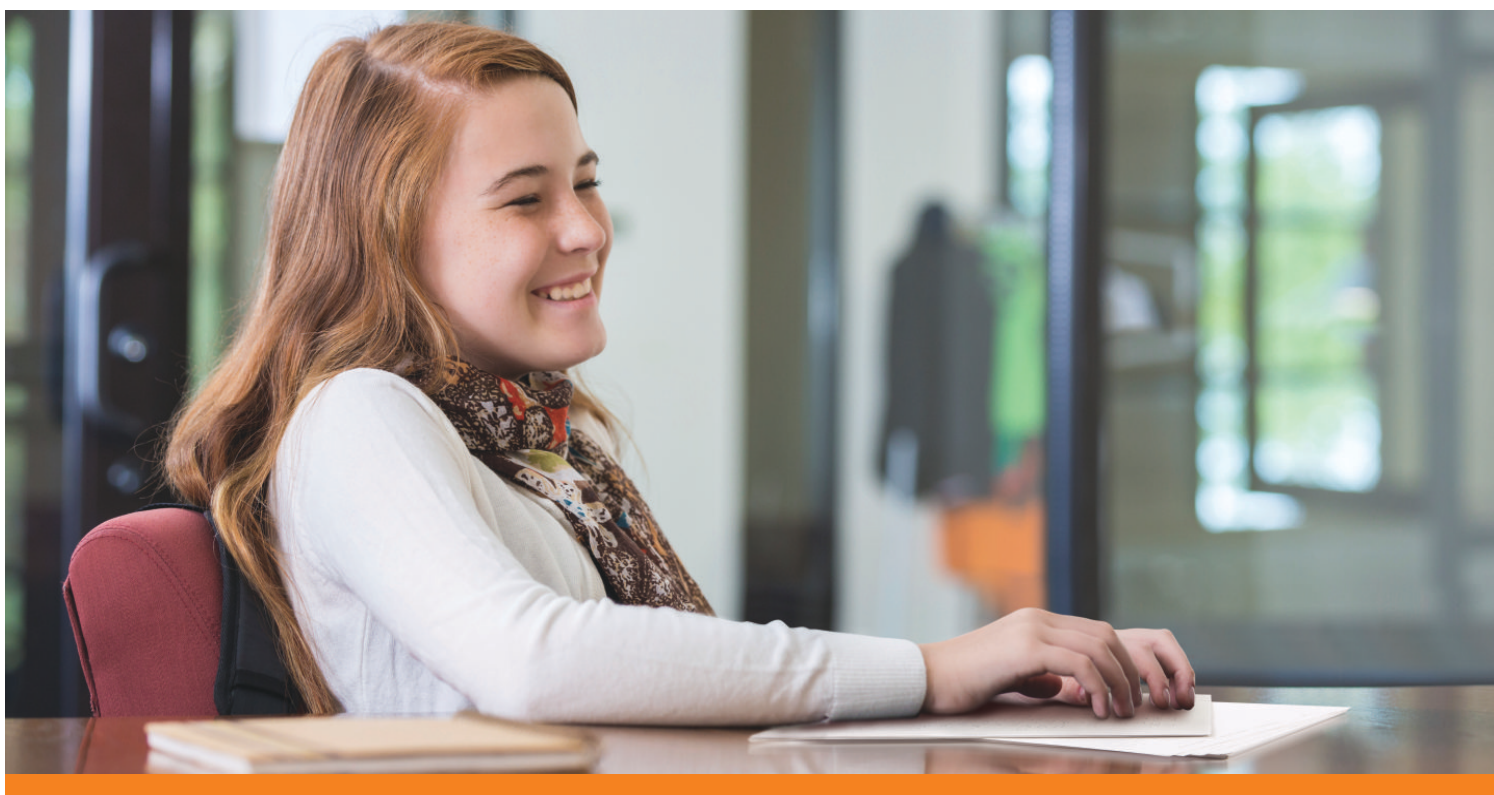

HIGH-QUALITY BRAILLE AND GRAPHICS WIRELESSLY AND AFFORDABLY

The next generation of Braille embossers is here, and it's all grown up, performing beautifully in school, work, and home settings. The new Romeo and Juliet continue to maintain their reputation for providing high-quality Braille, but they now have a new, modern platform.

Humanware™
see things. differently.

Romeo and Juliet have always been known as the easiest embossers to use

This new design maintains that ease of use, while also providing advanced features like tactile graphics and sideways printing for magazines and booklets.

The most convenient Braille embossers on the market

You can send files from your iPad® or other mobile device using Bluetooth. With the built-in Braille translator and Firebird, Romeo and Juliet can support all your brailleing needs. Your students can even send files directly from HumanWare's BrailleNote™ Touch. It's one-step printing at its best!

Romeo embosses single-sided, while Juliet supports double-sided (interpoint) Braille.

Romeo and Juliet are the only Braille printers that produce high-quality Braille text and graphics over Wi-Fi and Bluetooth at an affordable price. With Romeo and Juliet, there is truly a happy ending!

Romeo 60

Romeo is the most powerful and portable single-sided Braille embosser in the market. It can print up to 90 characters per second, for robust and reliable Braille production.

Juliet 120

Juliet produces double-sided Braille at up to 155 characters per second, for a real output of over 400 pages per hour.

Romeo & Juliet

Romeo and Juliet are such a devoted couple that they share many features and benefits. Both embossers have:

Unsurpassed Braille quality, for easy and confident reading

Bluetooth and Wi-Fi enabled, so you can send files from just about anywhere – a computer, iPad or other iOS device, Android device, thumb drive, and more

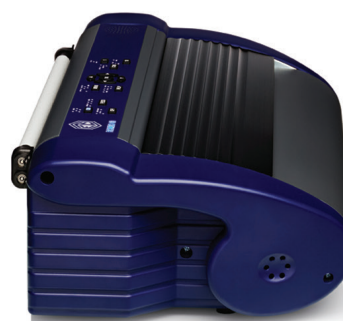

Firebird tactile graphics software included, so you can handle all your brailleing needs in one device

Sideways whilst retaining booklet printing styles, so you can print newspapers and magazines and retain formatting

UEB contracted Braille translator built in, making it easy to produce Braille documents quickly

American English speech, designed specifically for the US market

Lighted control panel with speech and Braille and tactile labels, making this embosser easy for both blind and sighted users

A new generation V5 solenoids on our embossers!

The solenoid is the core of a Braille embosser, which is why our embossers are injected with new, better solenoids, ultimately improving and lengthening their lifespan. Thanks to the new generation V5 solenoids, our embossers have a better Braille dot quality, a longer life cycle and lower power consumption.

WHAT IS NEW?

IMPROVED EMBOSSING QUALITY

Better Braille readability thanks to a better defined and more consistent dot.

BETTER EFFICIENCY

Lower power consumption; the printer will only use 50% energy compared to the previous versions.

BETTER TEMPERATURE RESISTANCE

The NEW solenoids aren't temperature sensitive at all. The mechanical impact energy level, and therefore the dot quality, will be the same regardless of temperature increases.

With the new V5 solenoids,
our great embossers just became greater!
