

StellarTrek

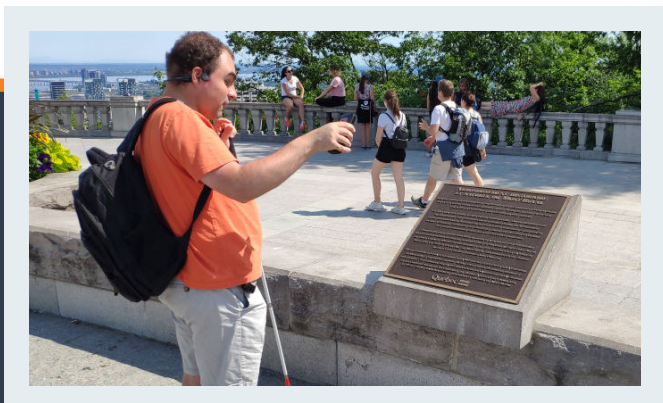

Leading the way in
orientation and mobility

The **StellarTrek** is specifically designed for orientation and mobility. Using state-of-the-art GPS technology and a user-friendly tactile interface with buttons, **StellarTrek** will guide you along your chosen route using appropriate voice commands.

Guiding you through the final 40 feet

As well as identifying landmarks and points of interest, **StellarTrek** provides an audio description of the upcoming intersection and also confirms the address of your destination.

The built-in optical sensor and artificial intelligence will help you locate and recognize street addresses, doors, and entrances, and provide audio and voice directions to the last 40 feet of your intended destination.

Recognizing and reading text aloud

The **StellarTrek**'s two cameras can also take a picture of an object to read a full document or short text on a surface, such as street or aisle signs, barcodes, receipts, or nutritional values on a food package.

Exploring your surroundings

In addition to being able to plan your trip from point A to point B, you can navigate and learn about your neighborhood or a specific area on a map for advance route planning while at home, at a restaurant, or even outside in the rain — the device is water-resistant and detects colour.

Improving accessibility, mobility, and autonomy

The StellarTrek's battery and offline capabilities are enough to last all day, so no need to worry about your smartphone's battery and data running out of steam for your navigation tasks. And with its user-friendly tactile interface, lanyard and belt clip, StellarTrek is the perfect digital assistant to improve your mobility.

Features

Microphone

Audio jack

Bluetooth

Water resistant

Cameras with text recognition capability

Available in 13 languages
